

**Math 483 - Spring 26**

**HOMEWORK 7**

Due Thursday April 2.

1. Consider the Petersen Graph:

- (i) Give an example of a minimum vertex cut for the Petersen Graph.
- (ii) Give an example of a vertex cut  $U$  for the Petersen Graph that is not a minimum vertex cut, and such that no proper subset of  $U$  is a vertex cut for the Petersen Graph.
2. Give an example of a 2-connected graph that is not 3-connected.
3. Give an example of a 2-edge connected graph that is not 3-edge connected.
4. Prove that if  $G$  is  $k$ -connected, and  $v$  is a vertex of  $G$ , then  $G - v$  is  $(k - 1)$ -connected.
5. Prove that if  $G$  is  $\ell$ -edge connected and  $e$  is an edge of  $G$ , then  $G - e$  is  $(\ell - 1)$ -edge connected.
6. Let  $G$  be a graph of order  $n$ , and let  $v$  be a vertex of  $G$ . Prove that if  $\deg_G(v) = n - 1$  and  $U$  is a vertex cut for  $G$ , then  $v \in U$ .
7. Let  $G$  be a 5-connected graph and let  $u, v$ , and  $w$  be three distinct vertices of  $G$ . Prove that  $G$  contains two cycles,  $C$  and  $C'$ , that have only  $u$  and  $v$  in common, and neither of them contains  $w$ .
8. Suppose that  $G$  is a  $k$ -connected graph, and  $u, v_1, \dots, v_k$  are  $k + 1$  distinct vertices of  $G$ . Show that we can find path  $P_1$  from  $u$  to  $v_1$ ,  $P_2$  from  $u$  to  $v_2$ ,  $\dots$ , and  $P_k$  from  $u$  to  $v_k$  such that  $P_1, \dots, P_k$  are internally disjoint.
